```
The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth factor-like proteins can replace as a graft for the bone marrow cell. The haematopoietic progenitor cell cultured using stem cell growth factor-like proteins can replace as a graft for the bone marrow cransplantation or cord blood transplantation for treating a variety of disease such as immunodeficiency syndrome, agammaglobulinaemia, whishort-Aldrich syndrome, agammaglobulinaemia, haemolytic anaemia deuce to enzyme defect, congenital anaemia such as sickle cell anaemia, Gaucher's disease, lysosomal storage diseases such as mucopolysactoharidosis, adrenal white matter categoneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiency syndrome deficiency syndrome deficiency syndrome deficiency accounting atthrible sclerosis, systemic continue describle and the immunodeficiency continued and such as multiple sclerosis, systemic continued and such as multiple sclerosis, systemic continued and such as manifical anaemia and autoimmune disorders such as multiple sclerosis, systemic continued and such as severe combined immunodeficiency and the such as multiple sclerosis, systemic continued and such as a such as and character and a severe combined immunodeficiency and the such as a such as and should a systemic combined and such as a such as 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is stem cell growth factor-like protein from human
    cancer, rheumatoid arthritis, osteoporosis.

Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells.

Claim 23; Page 72-73; 96pp; English.

The invention relates to an isolated stem cell growth factor-like collypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth carried carcivaty. Also included are an isolated polymucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polymucleotide, a host cell genetically engineered to contain the SCR-1 polymucleotide, a host cell genetically engineered to contain the SCR-1 polymucleotide in operative association with a requising the carpression product of the SCR-1 polymucleotide in the host cell, that controls expression of the SCR-1 polymeleotide in the host cell, that controls expression of the SCR-1 polymeleotide in the host cell, corresponding an expression of the SCR-1 polymeleotide with stem cell growth factor activity and activity to support proliferation or survival of haematopoletic stem cell acting any 10 consecutive as from Abo44430, an isolated SCR-1 polymeptide with stem cell growth factor activity and lacking any 10 consecutive and from Abo44430, an isolated strain and Abo44428 and Abo4 transplantation. The transplantation of haematopoietic stem cells can be employed as a therapy for treating diseases such as chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia,

                                                                                                                                The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, infinibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SRQ ID NO 2110 (AAK52581), 2111

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known solymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SKTH). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, haematopoietic progenitor cell, historially principal cell, haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The proteins can replace as a graft for the bone marrow factor-like proteins can replace as a graft for the bone marrow of disease, such as immunodeficiency syndrome, agammaglobulinaemia, disease, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), cuch as sickle cell anaemia, Gaucher's disease, lysosomal storage chiseases such as succhains diseases, lysosomal storage celseneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as severe combiocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63 PPALERIGMKQIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNPCTKCKSGFYLH 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is stem cell growth factor-like protein from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel stem cell growth factor like polypeptides and polymucleotides for identifying modulators useful for treating diseases such as Alzheimer's disease, cancer, rheumatoid arthritis, osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (SCID)) and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary

The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of seem cells (STCH-1). Stem cell growth factor-like proteins are useful for supporting proliferation or call growth factor-like proteins are useful for supporting proliferation or survival of a stem cell or germ cell, embryonic stem cell, paramatopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth cactor-like proteins can replace as a graft for the bone marrow cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, chronic granulomatous (Miskott-Aldrich syndrome, acquired immune deficiency syndrome, sagammaglobulinaemia, wiskott-Aldrich syndrome, adultence immune deficiency syndrome, adultence, and such as micopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tumours. Proteins of the invention care useful for treating diseases such as severe combined immunodeficiency of disease and other neurodegenerative diseases, thrombocyclopenia, immune deficiencies and disorders such as multiple sclerois, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequence is stem cell growth factor-like protein from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         63 PFALERIGMEGIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNPCTKCKSGFYLH 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               62 PFALERIGAKQIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCPNKNPCTKCKSGFYLH 121

```
The invention relates to new stem cell growth factor-like polypeptides and polymuclectides. The stem cell growth factor-like polypeptides and polymuclectides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. leukaemia, haemophilia and degenerative diseases like Alzheimer's leukaemia, paemophilia and degeneratiny ediseases. They are also useful for generating new tissues and organs that may aid patients in need of transplanted tissues. The polymuclectides are useful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in generating antisense DNA or RNA, in diagnostics as expressed sequence tags for identifying expressed generating antibodies that specifically bind the polypeptide, as molecular weight markers, and as a food supplement (e.g. protein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the current or prevention of cancers, and other immunological disorders. The current sequence represents a human clone 1 thrombospondin protein
                                                                                                                                                                                                                                                                                                  New stem cell growth factor-like polypeptides and polynucleotides, use for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.
                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Pig 1; 151pp; English

WPI; 2003-625403/59. N-PSDB; ACH04328 Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells.

Claim 23; Page 82; 96pp; English.

The invention relates to an isolated stem cell growth factor-like colls (SCR-1) from mouse or human, or its mature protein portion, or cells (SCR-1) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polynucleotide encoding CC SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polynucleotide, an (expression) vector comprising the CC SCR-1 polynucleotide in operative association with a regulatory sequence CC SCR-1 polymucleotide in operative association with a regulatory sequence CC SCR-1 polymore of the polynucleotide in the host cell, corression product of the SCR-1 polymucleotide (the polypeptide having an expression product of the SCR-1 polymucleotide (the polypeptide having an extryity to support proliferation or survival of haematopoietic stem cell cC comprise the as sequence appearing as ABO44431, an isolated SCR-1 polypeptide with stem cell growth factor activity and cisolated SCR-1 polypeptide with stem cell growth factor activity and constrain as as from ABO44430, an isolated polypeptide (with stem cell growth factor activity having at least an as sequence appearing as ABO44428 and ABO44429, a culture medium comprising the SCR-1 polypeptide in promocupie product proliferation of a stem collypeptide to maintain survival of or promocup proliferation of a stem

```
ccell or germ cell, an anti-SCR l antibody, a nucleic acid array

C comprising the SCR-1 polynucleotide or a unique segment of the SCR-1

C polynucleotide attached to a surface, a stronal cell genetically

c engineered to express the SCR-1 polypeptide to support proliferation or

Survival of a stem cell or germ cell and an implant comprising a cell

c genetically engineered to express the SCR-1 polypeptide to support

C proliferation or survival of a stem cell. The SCR-1

polypeptide is useful for identifying a compound that binds to the SCR-1

polypeptide and for maintaining survival of or promoting proliferation of

C progenitor cell. The SCR-1 polypeptide is useful for promoting wound

C progenitor cell. The SCR-1 polypeptide is useful for promoting wound

C progenitor cell culture using the SCR-1 plypeptide can replace as a

C progenitor cell culture using the SCR-1 plypeptide can replace as a

C progenitor cell culture using the SCR-1 plypeptide can replace as a

C progenitor cell culture using the SCR-1 plypeptide can replace as a

C progenitor cell culture using the SCR-1 plypeptide can replace as a

C progenitor cell culture using the SCR-1 plypeptide can replace as a

C progenitor the conventional bone marrow transplantation or cord blood

C progenitor the conventional bone marrow transplantation or cord blood

C progenitor the conventional bone marrow transplantation or cord blood

C progenitor the conventional bone marrow transplantation cord blood

C progenitor the conventional bone marrow transplantation or cord blood

C progenitor cell culture using the SCR-1 polypeptide is useful for cell growth and

C due to enzyme defect. congenital anemia such as slicklaemia, daucher's

C morphogenesis, including tissue specific stem cell growth, and regulation, ovarian follicle development, promoting nerve

C properior and immunosuppression. The present sequence is a Human SCR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein

c SCR-1 polymorlectide in the host cell, preparesion of the golymorlectide in the host cell, preparesion of the SCR-1 polymorlectide which is an expression product of the SCR-1 polymorlectide (the polypeptide having an activity to support proliferation or survival of haematopoietic stem cell cartivity to support proliferation or survival of haematopoietic stem cell cartivity to support proliferation or survival of haematopoietic stem cell conditions as ABO44431), an isolated SCR-1 polymorlectide with stem cell growth factor activity and isolated SCR-1 polypeptide with stem cell growth factor activity and lacking any 10 consecutive ass from ABO4430, an isolated polypeptide with stem cell growth factor activity and compraint as ABO44428 and ABO44429, a culture medium comprising the SCR-1 polymorlectide or a unique segment of the SCR-1 polymorlectide or a unique segment of the SCR-1 polymorlectide or a unique segment of the SCR-1 polymorlectide or surport proliferation or survival of a stem cell as surface, a stromal cell genetically comprising the SCR-1 polymorlectide or a unique segment of the SCR-1 polymorlectide or support proliferation or survival of a stem cell as surface, a stromal cell genetically component of a surface, a stromal cell genetically component or survival of a stem cell or gene cell or gene cell or genetically engineered to express the SCR-1 polymorlectide to support proliferation or survival of a stem cell or gene cell or genetically engineered to express the SCR-1 polymorlectice stem cell or a haematopoietic componenting survival of a stem cell or a haematopoietic component or cell component or cell or a haematopoietic component or cell or a haematopoietic component or cell or the conventional bone marrow transplantation or cell scan be comployed as a therapy for treating diseases such as chronic granulomators diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia when the conventional publicated or cell growth as sicklaemia due to enzyme defect, congenital su seeful for cell g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem feragement, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polynucheotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polynucleotide), an (expression) vector comprising the SCR-1 polynucleotide, a host cell genetically engineered to contain the SCR-1 polynucleotide in operative association with a regulatory sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ΰ

The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, emrenced for supporting proliferation or survival of a stem cell, embryonic stem cell, paramatopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth catorilke proteins can replace as a graft for the bone marrow transplantation or cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, chronic granulomatous of disease, duplicated immunodeficiency syndrome, chronic granulomatous wiskott-Aldrich syndrome, acquired immune deficiency syndrome, lubs), thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia culs as sickle cell anaemia due to enzyme defect, congenital anaemia degeneration, a variety of cancer and tumours. Proteins of the invention care useful for traating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as multiple sclerosis, a disease, Alzheimer's clisease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune such as evere combined immune pulmonary inflammation. Sequence is human secreted protein from clone DA228_6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FPALERIGMKQIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNPCTKCKSGPYLH 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AB044427;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 11
```

```
The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem colls (SCR-1)) from mouse or human, or its mature protein portion, or call famure protein portion, or call famure protein portion, or call growth factor activity. Also included are an isolated polymuclectide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the scrivity and required stem cell growth factor activity, or the complement of the polymuclectide, a most cell genetically engineered to contain the SCR-1 polymuclectide, a polymptide in the host cell, preparation of the SCR-1 polymuclectide in the host cell, preparation of the SCR-1 polymuclectide in the host cell, that controls expression product of the SCR-1 polymuclectide in the host cell, carrivity to support proliferation or survival of hasmatopoietic stem cell cartivity to support proliferation or survival of hasmatopoietic stem cell cartivity to support proliferation or survival of hasmatopoietic stem cell cartivity having at least an as sequence does not comprise the as sequence appearing as ABO44433 and ABO44430, an sisolated SCR-1 polypeptide with stem cell growth factor activity having at least an as sequence comprising the SCR-1 polymuclectide to maintain survival of or promote proliferation or survival of a stem cell or gene cell or gene cell or gene cell or gene cell or spense the SCR-1 polymuclectide to support proliferation or survival of a stem cell or gene cell or stem cell and an implant comprising to onlypeptide and for maintaining survival of or promoting proliferation or survival or a stem c
Stem cell growth factor-like protein; antianemic; anti-HIV; SCR-1; immunostimulant; vulnerary; haematopoietic stem cell; gene therapy; supporting factor for proliferation of stem cells; wound healing; haematopoietic progenitor cell; stromal cell; AIDS; thalassaemia; bone marrow transplantation; cord blood transplantation; chronic granulomatous disease; duplicated immunodeficiency syndrome; haemolytic anaemia; congenital anaemia; wishact-Aldrich syndrome; haemolytic anaemia; congenital anaemia; sichlaemia; Guotheri's disease; morphogenesis; epithelial cell growth; ovarian follicle development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chao C;

healing. The human haematopoietic stem cell or human haematopoietic progenitor cell culture using the SCR-1 polypeptide can replace as a graft for the conventional bone marrow transplantation or cord blood transplantation. The transplantation of haematopoietic stem cells can be employed as a therapy for treating diseases such as chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, AIDS. etc., thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's disease etc. the SCR-1 polypeptide is useful for cell growth and morphogenesis, including tissue specific stem cell growth, epithelial cell growth, sustaining neuronal populations, cartilage remodeling, bone growth and immunosuppression. The present sequence is a protein homologous to Human SCR-1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HPSAKGNLCPPTNETRKCTVQRKKCQKGERGKKGRERKRKKFWWKGESKEAIPDSKSLESS 242

The nucleotide sequence (NS) of the full-length protein-coding sequence of clones ci254 (AAV831312, da2286 (AAV83133), du4105 (AAV83134), eh801 (AAV83135), er3691 (AAV83136), fh1235 (AAV83137), fm601 (AAV83138) or fr4732 (AAV83139), (all clones are deposited as ATCC 98415) and the proteins they encode are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals for example, tumour suppression/invasion activity, immune system boosting activity. The polynucleotides are also believed to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; stem cell growth factor-like protein; antiinflammatory; nootropic; neuroprotective; vulnerary; cytostatic; anticonvulsant; immunostimulant; vasotropic; viruotide; dermatological; tranquilliser; cerebroprotective; osteopathic; immunodeficiency syndrome; chronic granulomatous disease; duplicated immunodeficiency syndrome; ejammaglobulnaemia; thalassaemia; dauplicated immunodeficiency syndrome; wiskott-Aldrich syndrome; AIDS; acquired immune deficiency syndrome; agammaglobulnaemia; thalassaemia; daucher; disease; lysosomal storage disease; mucopolysaccharidosis; adrenal white matter degeneration; anaemia; neurodegenerative disease; Parkinson's disease; Alzheimer's disease; thrombocytopaemia; SCID; severe combined immunodeficiency; immune disorder; antoimmune disorder; multiple sclerosis; systemic lupus erythematosus; rheumatoid arthritis; autoimmune pulmonary inflammation; cancer; tumour; gene therapy; SCR-1; supporting factor for the proliferation of stem cell.

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, or germ cell, germ line stem cell, embryonic stem cell, paramile stem cell, embryonic stem cell, paramile stem cell embryonic stem cell, paramile stem cell proposition cell, paramile stem cell proposition cell, paramile stem cell provents cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth cell cator-like proteins can replace as a graft for the bone marrow crowth seases such as immunodeficiency syndrome, chronic granulomatous diseases utplicated immunodeficiency syndrome, chronic granulomatous wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AlDS), thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia cuch as sickle cell anaemia due to enzyme defect, congenital anaemia desentation, a variety of cancer and tumours. Proteins of the invention cell sease and other neurodegenerative diseases, thrombocytopeania, immune deficiencies and disorders such as severe combined immune deficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 242

WPI; 2003-381616/36 WO2003029405-A2. Homo Bapiens .0-APR-2003. ABR62114; 63 183 Query Match rang YT; RESULT 19 8888888888888888 ð 셤 8 셤 셤 ð 셤 ò ò The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary decyribonucleic acid (cDNA) inserts (II), where the protein is substantially free from other mammalian proteins. (I) are useful for preventing, treating or preventing a medical condition, especially immunological treatment or prevention of tumours. (I) exhibits activity relating to angiogenesis, cytokine, cell proliferation, cell differentiation, antinflammatory, stem cell growth factor activity and activin or inhibin-related cryokine. (I) can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, autoimmune diseases and neuropathies, such as that the properties of the treatment of central and peripheral nervous system diseases and neuropathies, such as that a clare or by Parkinson's disease, fluttington's disease, amyotrophic attains a clerosis. (I) is involved in chemotactic or chemokinetic activity, regulation of haematopolesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopaemia Human; cytostatic; antirheumatic; antiarthritic; vulnerary; analgesic; antiinflammatory; antibacterial; immunosuppressive; antiparkinsonian; neuroprotective; nootropic; osteopathic; haemostatic; vasotropic; antiulocer; fungicide; antidabetic; antiasthmatic; antiallergic; immunostimulant; antiparasitic; secreted protein; transmembrane protein; cytokine; cell proliferation; cell differentiation; autoimmune disease; stem cell; growth factor; nervous system disease; neuropathy; Alzheimer's disease; Parkinson's disease; Huntington's disease; osteoporosis; severe combined immunodeficiency; SCID; infection; multiple sclerosis; rheumatoid arthritis; gene therapy. Novel secreted or transmembrane protein and polymucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis. Evans C; Collins-Racie LA, Claim 207; Page 203-204; 284pp; English KEIPEQRENKQQQKKRKVQDKQKS 265 Lavallie ER, C ABP61846 standard; protein; 292 Human polypeptide SEQ ID NO 200 22-DEC-2000; 2000US-00745763. 98US-00040963 MCCOY J M. ö
and for regeneration of bone, cartilage, tendon, ligament and/or nervetissue growth and in tissue repair, healing of burns, incisions, ulcers, for treating osteoprosis, osteoarthritis, bone degenerative disorders or periodontal disease. (1) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis, diabetes mellitus, myasthenia gravis, allergic reactions and conditions, such as asthma or other respiratory problems. (II) is useful to express recombinant protein, as markers for tissues in which the corresponding protein is preferentially expressed and in gene therapy. The present sequence is that of a polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 242

The invention relates to new stem cell growth factor-like polypeptides and polynucleotides. The stem cell growth factor-like polypeptides and polynucleotides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. leukaemia, haemophilia and degenerating different cell types, for treating e.g. leukaemia, haemophilia and degenerating mew tissues and organs that consistent of patients in need of transplanted tissues. The polynucleotides are useful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in consistent of generating antisense DNA or RNA, in diagnostics as expressed sequence tags for identifying expressed genes, and for inducing immune response. The polypeptides are useful for generating antibodies that specifically chind the polypeptide as molecular weight markers, and as a food supplement (e.g. protein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the current cor prevention of cancers, and other immunological disorders. The current cor prevention of cancers, and other immunological disorders. The current cor prevention of ancers, and other immunological disorders.
                      New stem cell growth factor-like polypeptides and polynucleotides, useful for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.
                                                                                                                                                  Disclosure; Fig 2; 151pp; English

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, A

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Interse edveloping nervous system, the ribs and the liver, but markedly upregulated at discrete sites during development. At ES.5, prominent expression in extrembly pronic endoderm, and on and nascent mesoderm. At ES.5, abundant expression in somites and yolk sac followed by a confination to dermamyotome compartment. Between ES.5 and ES.1.5, abundant expression in the limbs is confined to the condensing mesenchym surrounding the cartilage. At this stage, strong expression also detected in vertebral and facial cartilage primordia and in the muscle of the tongue. At ES.5, abundant expression in petchelial cells of the intestinal villi. Isoform A is most abundant at all stages but significant levels of isoform B occur at ES.2.5.
Isold-Common and in the muscle as an intramolecular chaperone assisting the folding of the zymogen within the endoplasmic

"Murine subtilisin-like proteinase SPC6 is expressed during embryonic implantation, somitogenesis, and skeletal formation.";

"Murine subtilisin-like proteinase SPC6 is expressed during embryonic implantation, somitogenesis, and skeletal formation.";

Dev. Genet. 21:75-81(1997).

"In plantation, likely to represent a widespread endoprotease activity within the constitutive and regulated secretory pathway. Capable of cleavage at the RX(K/R)R consensus motif. May be responsible for the maturation of gastrointestinal peptides. May be involved in the cellular proliferation of adrenal cortex via the activation of growth factors.

C.I. CMTALYIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg-Xaa-ARG-I-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys.

C.I. SUBCELLULAR LOCATION: PCSA IS SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PCSB IS A TYPB I MEMBRANE PROTEIN LOCALIZED TO SECRETORY PATHWAY. PCSB IS A TYPB I MEMBRANE PROTEIN WITH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DOMAIN: AC 1 and AC 2 (clusters of acidic amino acids) contain sorting information. AC 1 directs TGN localization and interacts with the TGN sorting protein PACS-1.
SIMILARITY: Belongs to peptidase family $8.
SIMILARITY: Contains 1 homo B/P domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bvent=Alternative splicing; Named isoforms=2;
Comment=Additional isoforms seem to exist;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              InterPro; IPR006212; Purin repeat.
